Business Insights

The name of the database is called Testing database and has five distinct tables which are dbo.Customer, dbo.Order, dbo.OrderItem, dbo.Product and dbo.Supplier. Each table contains valuable information about the customer, their orders, order items, products and supplier. It is a vast database and sometimes I do have to use the JOIN clause to get information from both tables. The most common language spoken for most of these companies are in English.

From my queries, it seems that France and the USA as a country have more customers than other countries put together. Horst Kloss (Customer) has the highest total order amount totaling 117,483.39. The total number of orders is 33 and totaling the amount of 66692.80.
